About us

A delivery partner for companies building their internal systems or digital products.

IbnKhafagah for Development is an Egyptian software house building the operational systems companies run on. We work with organisations that have outgrown spreadsheets and stopgap tools and need a system their own team owns.

DELIVERED

Shipped systems, not prototypes

Seven sectors, all running in production today.
Every figure on this page is read from the codebase rather than estimated.

OWNERSHIP

Full source-code ownership

You receive the repository, the database and the documentation on delivery. No licence fees, no permanent vendor lock-in.

CADENCE

Incremental sprint delivery

Each sprint ends with a working build on a staging link you can use yourself, instead of discovering gaps at final handover.

INTEGRATION

Ready to integrate

Working integrations with the Egyptian Tax Authority, payment gateways, couriers and messaging providers — in systems live today.

86

project workspaces

61

Laravel applications

2,788

database migrations

2,052

data models

4,106

application routes

8

years delivering

Figures measured directly from the codebases shown here.

What we build

Domains where we already have systems running in production.

ERP

ERP Systems

Inventory, accounting, purchasing, sales and HR in one connected system instead of scattered spreadsheets.

HMS

Hospital & Clinic Systems

Bookings, patient records, pharmacy, lab, radiology, insurance and medical billing — with approval chains and audit trails.

ETA

E-Invoicing & Tax

Full integration with the Egyptian Tax Authority: issuing, signing, submitting and tracking every document.

LOG

Shipping & Tracking

Merchant and courier portals, live GPS tracking, route optimization, cash on delivery and financial settlements.

COM

Commerce & Delivery

Multi-vendor stores, carts, coupons and wallets, payment gateways, and customer and courier apps.

LMS

Learning Platforms

Courses, live sessions, exams and certificates, with subscriptions, affiliate marketing and instructor wallets.

API

Mobile APIs

Documented REST APIs secured with JWT/Sanctum, ready for your iOS and Android teams.

OPS

Dashboards & Reporting

Role-based dashboards, live reporting, and Excel/PDF export for millions of rows without timing out.

How we work

A Scrum cadence with short sprints, incremental delivery and a review at the end of each one.

01

Discovery & Scope

A working session that produces a prioritized backlog and a clear line between what is in scope and what is not.

02

Architecture

Database, modules and API contracts designed before any code is written, so nothing gets rebuilt later.

03

Sprint Delivery

One or two-week sprints; at the end of each you get a working build on a staging link you can actually use.

04

Testing & Review

Peer code review, PHPUnit tests and SonarQube quality gates before anything reaches production.

05

Launch & Support

CI/CD deployment with backups and monitoring, plus an agreed support window after launch.

Have a system to build?

Send us the project idea and we come back with an initial scope, a timeline and a cost estimate — free of charge, and the document is yours either way.

01

Send us a short brief

The problem to solve, who will use the system, and any existing system to replace or integrate with.

02

A discovery session within 48 hours

Remote or in person, turning the brief into a prioritised requirement list.

03

A written scope document

Scope, timeline and cost estimate — free of charge, and yours to keep whether or not we work together.

Start the conversation

Email us, message us on WhatsApp, or send the form on our website.
